Recording feedback · Umpan balik rekaman

Run r_20261101_111241_8b0713 · 2026-11-01 · RECORD AGAIN / REKAM ULANG

What failed

- **G1** Track coverage is 71%: the object was not found in some frames, usually from motion blur. Use slow motion or more light.
- **G2** Ruler scale (0.415 mm/px) and ball-diameter scale (0.668 mm/px) disagree by 61.1%. The ruler is probably closer to or farther from the camera than the ball's path. Tape the ruler to the wall directly behind the falling ball.
- **G3** The fit explains the track poorly (R^2 0.9975, RMS 5.02 px). The fit window may include contact or hands.

Tips

- Record in bright light and use slow-motion mode to reduce motion blur
- Tape the ruler flat on the wall directly behind the ball fall path so ruler and ball are the same distance from the camera
- Hold the ball steady beside the ruler, then release gently without pushing and move the hand out of view
- Keep the phone still on a support with the ruler and full fall visible from release to floor impact

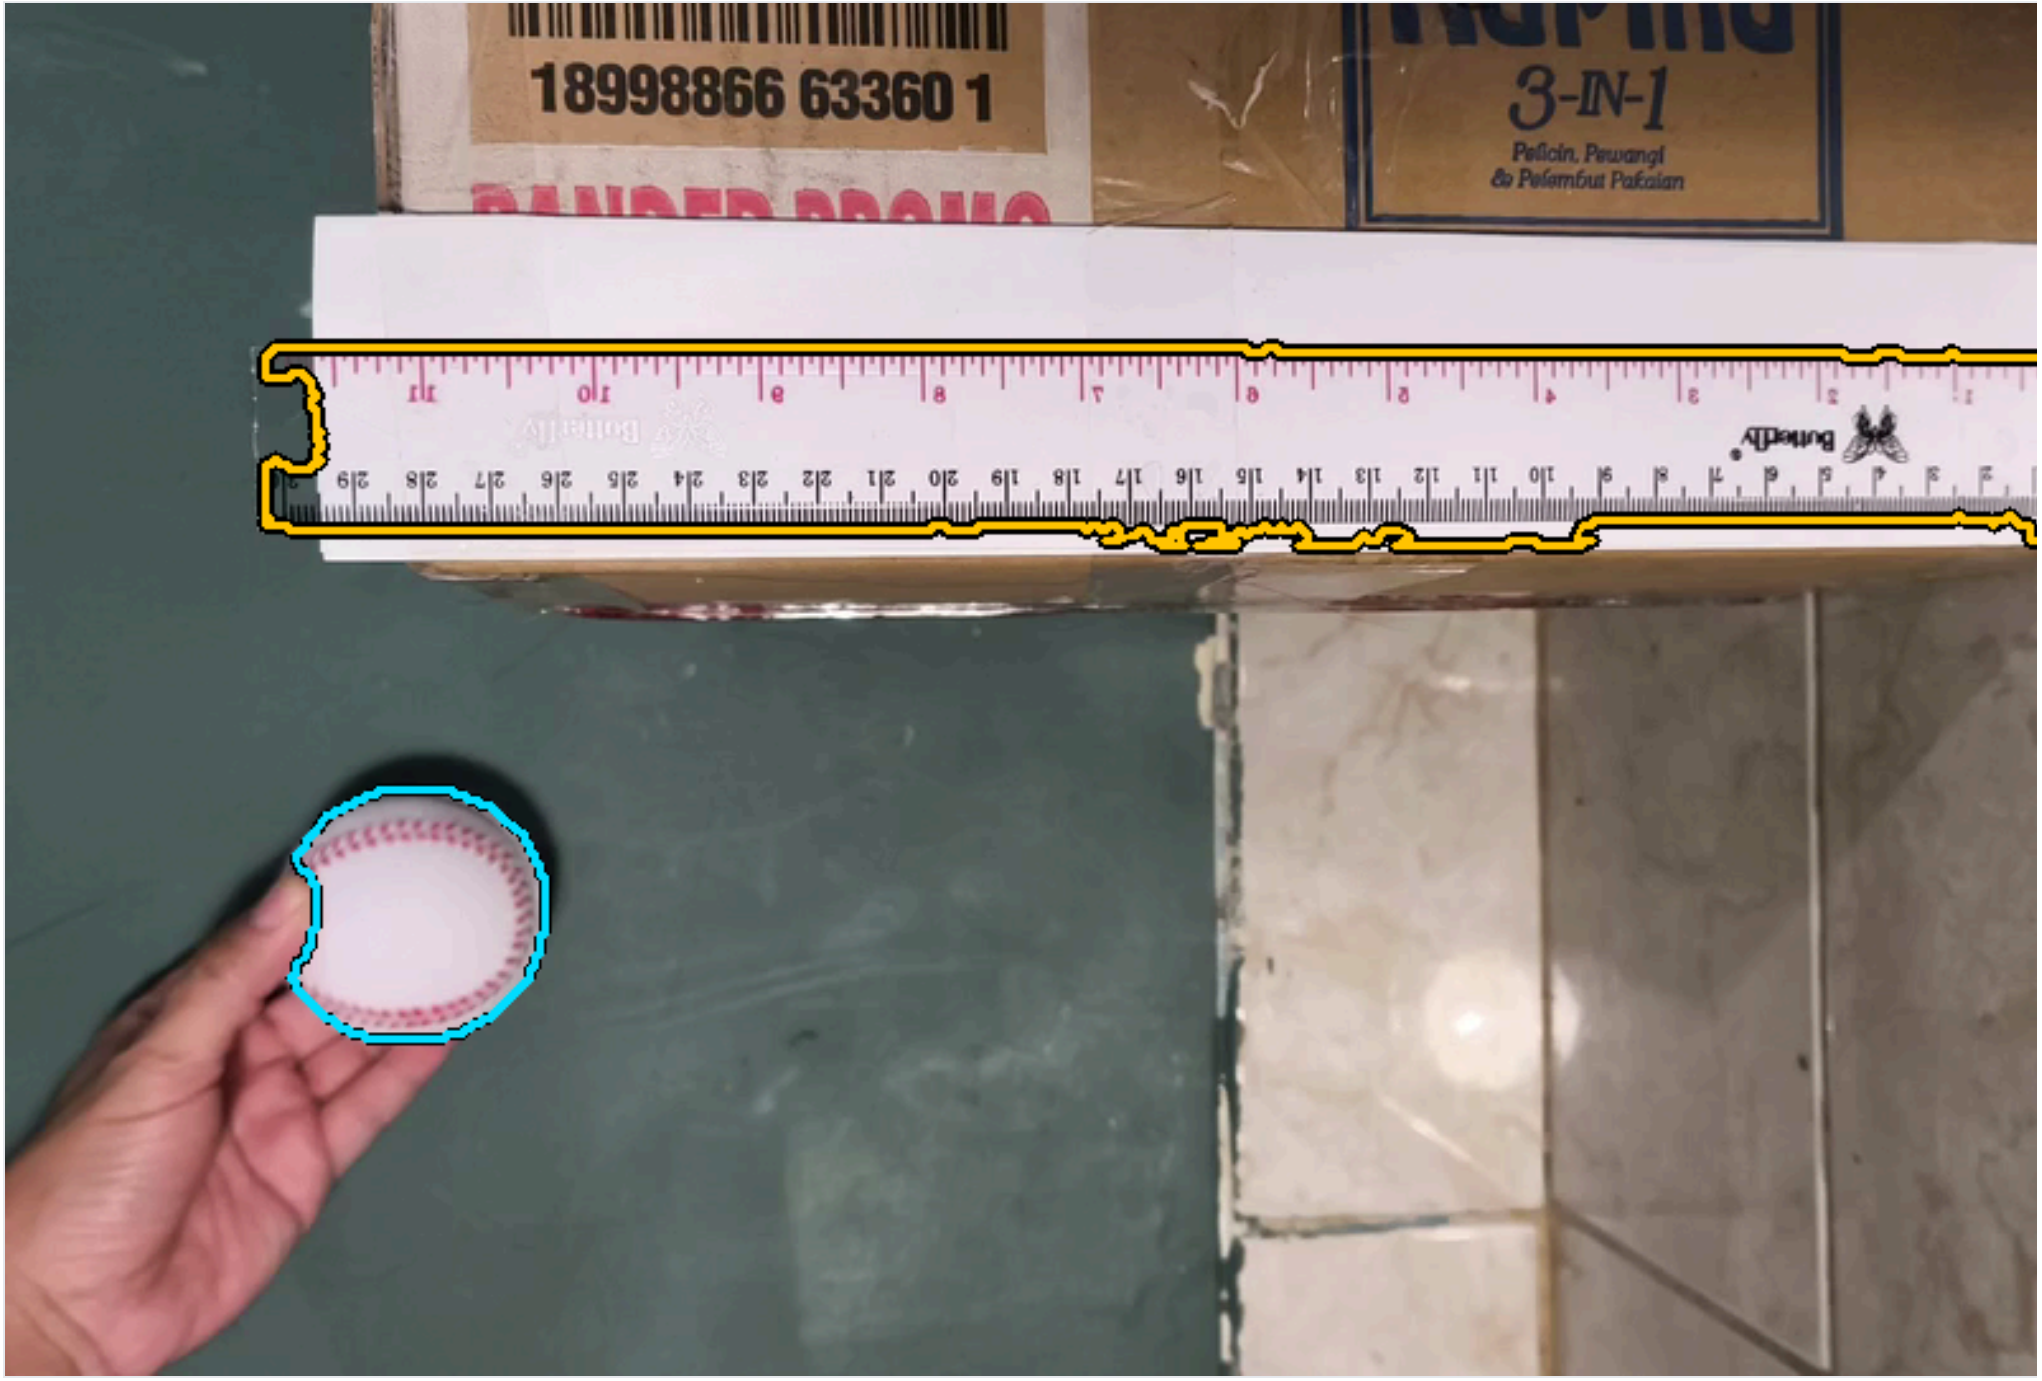

Yang gagal

- **G1** Cakupan lintasan 71%: objek tidak terdeteksi di sebagian frame, biasanya karena blur gerak. Gunakan slow motion atau tambah cahaya.
- **G2** Skala penggaris (0.415 mm/px) dan skala diameter bola (0.668 mm/px) berbeda 61.1%. Penggaris kemungkinan tidak sejajar dengan lintasan bola. Tempel penggaris di dinding tepat di belakang lintasan bola.
- **G3** Fit menjelaskan lintasan dengan buruk (R^2 0.9975, RMS 5.02 px). Jendela fit mungkin memuat kontak atau tangan.

Saran

- Rekam di cahaya terang dan gunakan mode gerak lambat agar bola tidak buram
- Tempel penggaris tegak di dinding tepat di belakang jalur jatuh bola agar jarak ke kamera sama
- Pegang bola dengan tenang di samping penggaris lalu lepaskan perlahan tanpa didorong dan jauhkan tangan dari kamera
- Diamkan ponsel di atas penyangga dengan penggaris dan seluruh jatuhan terlihat dari lepas sampai lantai
